When managing nature means managing people...

Face-to-face Nature Conservation

Provocative Questions and Useful Retorts

by Michael Stachowitsch,
University of Vienna

This primer equips practitioners – teachers, students, researchers, citizen scientists, park rangers and guides, zoo staffs, and volunteers – for what they can expect to hear while going about their business. It provides a set of concise answers to over 200 questions or assertions arranged in 20 headings covering major ecosystems and their inhabitants, natural history institutions, as well as various human perspectives and activities. You'll never again be caught off guard, stumped, or flustered. A dash of humor and a twinkle in the eye maximizes the chances that those on the other side of the proverbial fence will shake your hand and urge you to keep up the good work. No team should gear up for work without a copy of this book.

"This book will, I feel, help lift its readers from their doldrums and give them some answers and also a smile. It is lucid, witty, well informed and opinionated in a good way. Ideal for use by undergraduate students, lecturers can also use it to provoke discussion and debate."
Mark P. Simmonds, OBE, Director of Science for OceanCare

"It is a major challenge for everyone working in nature conservation and environmental protection who are confronted with the general public to provide good answers to questions and to counter sometimes misguided or even provocative statements. This book is an enormous help in this regard, offering a rich source of possible answers." **Patricia Holm, Emeritus Professor of Ecology, University of Basel**

"This light-hearted and 'bite-sized' issue-by-issue approach is useful for getting people connected with today's scientific fascinations, but also the pressing issues with which we have to grapple but are doing so extremely sub-optimally today.
Mark Everard, Associate Professor, UWE

"The succinct primer is a good jumping board for coming up with custom retorts using humour to respond to challenging questions and diffusing potentially conflict-inducing situations."
Kadambari Devarajan, ecologist, writer, and National Geographic Explorer

TABLE OF CONTENTS

Introduction. 1. General. 2. Science. 3. Extinction and Evolution. 4. Terrestrial. 5. Freshwater. 6. Marine. 7. Hunting and Fishing. 8. Pets. 9. Zoos and Public Aquariums. 10. Natural History Museums. 11. Pollution. 12. Energy. 13. Climate Change. 14. Construction Projects and Zoning. 15. Money and Jobs. 16. Politics. 17. Radicalism. 18. Hairbrained Ideas. 19. Pessimism/Nihilism/Cynicism. 20. Activism and Helpful Souls
